

The world
needs plastic
and we need
the world.

Foreword

Hello reader,

Thank you for taking the time to read our catalogue! Within these pages, you will become familiar with our company, our vision, our products, and our services. Additionally, you will be informed and inspired about packaging and sustainable options within the plastics industry.

If you need additional information about a specific product, simply scan the QR-code to visit the product page on our website. There, you can easily order and browse alternative products. Meanwhile, feel free to contact us with any questions, wishes, or ideas. Together, we will unbottle your success with the right sustainable packaging!

Best regards,
John van Dijk
Managing Director

Founder Nico (father) & owner Frank (son)

“Where would we be without plastic? Let’s cherish and renew it!”

Nice to meet you

We are a creative and technical partner in the field of plastic bottles. But what really defines us is our commitment to society and nature. Because even in the packaging business, there is always a way to be kind to humans and the earth. Hd packaging sets the standard and invites you to join us on the path to sustainability.

One way of doing that is by setting the right example with our own decisions, such as producing in Europe with our long-standing partners who share our vision. We aim to turn our fleet entirely electric, make our bottles as light as possible to save plastic, actively use recycled materials, and make conscious decisions regarding transport and distribution. Moreover, we help people who are disadvantaged in the labour market to re-discover their way in their professional lives. As a family business, we want to preserve the world for our children, their children,

and future generations. This includes our future clients and end users. However, we cannot achieve this alone. We must all take responsibility together. We recognize that plastic drives the packaging industry, but we must also demonstrate how plastic can be used ethically to ensure the sustainability of our industry. Functional, aesthetic, and sustainable packages are needed now.

How we bottle your success

At hd packaging Design, we believe that every bottle tells a story. Our innovative

approach combines top-notch design and practicality to ensure that your product stands out on the shelves. Since 1970, we've been crafting custom and standard moulds with precision and creativity. Our high quality bottles, made from recycled PET and HDPE, are not just containers but statements of excellence.

We offer tailored solutions, whether you need unique designs or cost-effective standard bottles. Our experienced team conducts thorough market research and uses cutting-edge technology alongside skilled craftsmanship to deliver the best results. Additionally, we provide a 'half-way house' option where you share development costs for exclusive rights, ensuring affordability and exclusivity.

Partner with hd packaging Design and let's unbottle the potential of your product together!

Nice to meet you

The power of plastic...

Plastic may not seem special, but it is one of the strongest and lightest materials available. It protects valuable products while being transparent and is incredibly durable. As a producer of products, plastic offers numerous advantages compared to other packaging materials.

Strong and light

Plastic is ideal for production and transport. It requires less material to protect products, making it efficient and cost-effective.

Perfect protection

Plastic safeguards against external factors like oxygen, CO2, and other airborne agents, preserving product integrity.

Durable and recyclable

Plastic lasts long and can be reused repeatedly if we recognize its value as a resource, thus reducing waste.

Versatile and attractive

There are many types of plastic packaging that can protect a wide range of products while looking appealing and innovative.

Moreover, plastic is integrated into our daily lives. It is everywhere, even though we may not realize it every day. It is in the casing of your laptop, the interior components of your car, and kitchen appliances. Furthermore, it protects your food and beverages, keeping them safe and fresh.

“It’s time that we start looking at plastic as a valuable material instead of as something without value. Then, plastic waste would be used again as a resource for new products.”

...with respect for the world!

A world where we make use of the advantages of plastic, without wasting it and polluting the nature. Because it is true: plastic waste remains over 500 years in nature. But what about glass jars and bottles, that stay 1 to 2 million years? Or soda cans of aluminium, which remain 200 years in nature? Cardboard drink or milk cartons only stay 2 to 3 months in nature, but don't offer moisture protection, a barrier against CO₂, oxygen, odours or a transparent look.

Responsible use of plastic

Did you know that using plastic is not as bad for the environment as you might think? First, plastic can also be made of raw materials such as corn, instead of petroleum. Second, plastic packaging

has a relatively small carbon footprint because it is light and thin-walled. You only need a small amount per product. The energy used for production and transportation is limited. So why do we throw away such a valuable material that can be reused for multiple purposes?

It would be great if more companies and consumers chose recycled plastic instead of non-recycled plastic. That way, plastic waste becomes valuable again, and plastic becomes the more sustainable choice. Therefore, we invite you to choose recycled plastic packages.

A quick guide to bottle shapes

Choosing the right bottle shape is essential for both functionality and brand identity. This quick guide will help you understand the various shapes available and how each can best serve your product's needs. All of these shapes are available in PET, HDPE, and their recycled equivalents, with matching closures.

Round Bottles

Round bottles are the most common and versatile shape in the packaging industry. Their cylindrical design makes them easy to handle and label, and they are widely used in cosmetics, beverages, and cleaning products. Their classic shape is both timeless and functional.

Oval Bottles

Oval bottles offer a unique blend of style and practicality. With their smooth, elongated shape, they provide a comfortable grip and a sleek profile. This shape is often chosen for personal care products, like lotions and shampoos, where an ergonomic design is desired.

Rectangular Bottles

Rectangular bottles are known for their space-saving design. Their flat sides make them easy to stack and store, maximizing storage efficiency. This shape is popular in the food and beverage industry, particularly for sauces, juices, and condiments, where efficient packaging is key.

Round

Oval

Rectangular

Square Bottles

Square bottles stand out for their modern, edgy look. Their uniform shape allows for tight packing on pallets, reducing wasted space during shipping. They are typically used for premium products like speciality beverages and luxury cosmetics, where both style and practicality are important.

Diverse and Custom Bottles

This is a wide range of unique and specialized shapes that don't fit into the standard categories. These can include custom designs tailored for specific products, offering distinct branding opportunities. Diverse shapes are often used in niche markets, where a unique bottle can make a product stand out on the shelf.

Whether you prioritize efficiency, aesthetics, or a unique brand statement: hd packaging has always a bottle shape to match your goals. Explore these options to find the perfect fit for your product and market. We will gladly assist you with personalized advice for your product line!

The top 5 series shaping industries

In the vast world of packaging, certain bottles stand out for their unique designs, practicality, and widespread use. Here's a quick rundown of the top five bottles that are making waves across various industries.

1. Basic Round Series (HDPE)

The Basic Round is the undisputed classic in the packaging world, particularly in the cosmetics industry. With its timeless cylindrical design and friendly, rounded shoulder, this HDPE bottle is a go-to choice for everything from beauty products to cleaning sprays. Its neutral, elegant appearance makes it easy to label and decorate, while its stable shape ensures it stands proudly on any shelf. The Basic Round's versatility and subtle charm have earned it the title of the "mother of all cosmetic bottles."

2. Basic Sharp Series (PET)

Offering a touch of luxury, the Basic Sharp is a more refined cousin of the Basic Round.

Crafted from PET, this bottle features a sharp cylindrical shape and flat shoulder, giving it a sleek and sophisticated look. It's particularly popular in high-end salons and for premium cosmetic products. Though it shares the same reliable properties as the Basic Round, the Basic Sharp's glossy finish and modern design make it a preferred choice for those seeking a slightly more upscale aesthetic.

3. Multi Series (HDPE)

The Multi series is a powerhouse in the packaging world, known for its incredible versatility. This series covers a wide range of applications, from laundry detergents and cleaning products to motor oils and liquid plant food. Available in various shapes, sizes, and with multiple closure options, the Multi series lives up to its name. Whether it's a soap bottle, trigger spray, or a large-capacity WC bottle, this family of bottles can handle it all. Its multi-functional design makes it a staple across multiple industries.

4. Juice Square series (PET)

Breaking away from traditional round designs, the Juice Square PET is a standout in the beverage industry. One of the first to introduce a square shape, this bottle has become a favourite for juices, smoothies, and fruit drinks. Its square design allows for efficient packing and storage, while the fixed cap ensures no plastic waste ends up in nature. The Juice Square PET is not just innovative, but also highly practical, offering a perfect blend of form and function.

5. Sauce Cylinder Series (HDPE)

The Sauce Cylinder might seem unassuming, but it's a staple in the food service industry. This HDPE bottle, often seen in restaurants and home kitchens, is designed for practicality. Its cylindrical shape and soft, squeezable material, thanks to a 50% LDPE mix, make it ideal for dispensing sauces and dressings. The Sauce Cylinder is all about utility— simple, effective, and reliable, proving that sometimes the best designs are the ones that simply get the job done.

What bottle suits your industry?

These five bottles represent the best in packaging design, each excelling in its respective niche. All of them have various closing options, including several caps and pumps.

Do you seek advice on what bottles are suitable for your industry?

Please contact us for personalized advice.

PET & R-PET

Sustainable, recyclable, durable and cost-efficient

Polyethylene terephthalate (PET) is a widely used plastic material known for its durability, lightweight nature, and recyclability. It is ideal for making bottles and packaging due to its clarity and strength. Recycled PET (rPET) is PET that has been reprocessed after use, contributing to sustainability by reducing waste and consuming less energy than newly produced PET. rPET retains most properties of new PET, such as strength and clarity, although it can often be slightly discoloured. By choosing rPET bottles, you support a circular economy and reduce the ecological footprint of your products. Let's highlight the differences and introduce available shapes, series, and closures

PET

Polyethylene terephthalate (PET) offers excellent durability and impact resistance, making it an ideal choice for packaging solutions. Its lightweight nature helps reduce transportation expenses, and its clarity enhances product visibility. Additionally, PET is highly recyclable, contributing to environmental sustainability by reducing waste and conserving natural resources. This material is also safe for food and beverage storage, ensuring that it does not react with the contents. PET's versatility extends beyond packaging, finding applications in textiles and automotive parts. By selecting PET bottles, you benefit from a reliable, sustainable, and versatile material suitable for a wide range of uses.

Recycled PET

Recycled PET (rPET) is an eco-friendly alternative to virgin PET, produced through reprocessing used PET bottles and containers. This process significantly reduces waste and energy consumption, supporting a more sustainable environment. rPET maintains similar properties to new PET, including strength and clarity, though it may exhibit slight colour variations. Advancements in recycling technology have improved the quality of rPET, making it a viable option for various packaging needs. By opting for rPET bottles, you help promote a circular economy and minimise the ecological impact of your products. rPET is an excellent choice for those committed to sustainability without compromising on quality.

PET

Basic round

- Round bottle
- Also available in recycled PET
- Rounded shoulders
- Also known as Boston Round, Tall Boston Round
- Custom color available for orders from 25,000 units
- Different sizes in stock
- Made in Europe

Examples of fitting closures

Volume (ml)	Neck Finish	Dimensions (mm)
50	24.410	85.5 x 33.6 x 33.6
100	24.410	116.7 x 39.2 x 39.2
150	24.410	129.9 x 44.2 x 44.2
200	24.410	147.9 x 48.0 x 48.0
250	24.410	163.4 x 53.0 x 53.0
300	24.410 / 28.410	165.9 x 54.0 x 54.0
400	24.410	179.9 x 61.2 x 61.2
500	24.410 / 28.410	179.9 x 68.4 x 68.4
1000	28.410	209.9 x 87.0 x 87.0

Looking for clear, versatile packaging?

The Basic Round PET is perfect for cosmetics, cleaning products, and pharmaceuticals. Its transparent material ensures exceptional visibility, while the simple round design makes it effective for various applications.

Message in a bottle

Telling your story through design

Marc our bottle designer

A bottle is so much more than the container for your product. It can be the eye-catcher on the shelf, the advertisement in the bathroom or kitchen, and an extension of your brand identity. Moreover, it is a way to inform customers about your brand and what's in the bottle. What should you consider when you design your bottle? We'll share our best insights with you.

Focus on design and ergonomics

A well-designed bottle is user-friendly and aesthetically pleasing. The shape, size, and functionality should come together. The best product is easy to handle and appealing to see. How great would it be if your product was just sitting on the countertop, instead of at the back of a cupboard?

Consider a different shape

Each product category has shapes that are commonly used. However, you might want to stand out with a different shape. Some of our customers even choose a temporary different shape, to celebrate a limited edition of their product.

Think about transparency

Do you want to show the substance of your product, or do you prefer to keep it mysterious? For orange juice, it can be appealing to see how fresh your product is. Other products cannot stand the light and benefit from more opaque packaging, such as self-care products.

Provide clear and informative labels

Many people compare labels before buying a product. So it better be good! Depending on your product, you should provide information about the ingredients, the origin of the ingredients and the way to use the products. You should also mention an expiration date.

Incorporate branding elements

Any bottle, as small or big as it is, is another part of your branding story. The moment that a customer grabs your bottle in the store can be the first introduction to your brand. Therefore, we strongly advise mentioning a cohesive brand story on all bottles.

Used recycled or recyclable materials

Sustainability is growing in importance. Not only to companies, but also to customers worldwide. With the right bottle design, you can show that you have chosen recycled materials. On the label, you can add more information about how the production of your product is environmentally friendly.

There are indeed many factors to consider. Luckily, you don't have to figure it out all on your own. Hd packaging is always up for a branding challenge in making the best bottles possible. We will inform you about all your options: from materials, to shapes, pricing, and labels.

the right packaging for your
products.**

HDPE & R-HDPE

Robust, durable, versatile and moist-resistant

High-density polyethylene (HDPE) is a widely used plastic known for its robustness and versatility. It is an essential material in various industries, particularly for packaging and construction, due to its durability and resistance to moisture and chemicals. Recycled HDPE (rHDPE) takes the benefits of HDPE a step further by reprocessing used HDPE, thereby promoting sustainability. Utilizing rHDPE helps reduce environmental impact, conserve resources, and lower production costs. Both HDPE and rHDPE play crucial roles in modern manufacturing, offering solutions that balance performance with environmental responsibility. Understanding their unique benefits can guide better choices in material selection for various applications.

HDPE

HDPE is a strong, durable plastic renowned for its impact resistance and low moisture absorption. These properties make it ideal for a wide range of applications, from piping systems to packaging. HDPE is particularly valued in industries requiring robust containers and protective elements due to its high tensile strength and resistance to chemicals. Its lightweight nature also contributes to its popularity, reducing transportation expenses while maintaining product integrity. Additionally, HDPE's recyclability supports environmental sustainability, making it a favoured choice for eco-conscious manufacturers seeking reliable and versatile material solutions.

Recycled HDPE

Recycled HDPE (rHDPE) is HDPE that has been reprocessed after its initial use, contributing significantly to environmental sustainability. The recycling process involves collecting, sorting, cleaning, and re-melting HDPE waste to form new products. rHDPE retains many properties of virgin HDPE, such as strength and durability, though it may exhibit slight colour variations. Using rHDPE reduces plastic waste in landfills, conserves natural resources, and requires less energy than producing new HDPE. This makes rHDPE a cost-effective and eco-friendly alternative, supporting a circular economy and reducing the overall ecological footprint of plastic products.

100% PET

100% RECYCLED

From waste to resource

Quick guide on how to (re)use plastic properly

Plastic is a fantastic product if we use it right. As a producer and distributor of plastic bottles, we know how to do this. However, we are aware that we cannot do this alone. To successfully use plastic in an environmentally friendly way, we need our chain partners to collaborate with us. In this overview, we share 7 tips on how to do so.

Choose the right kind of plastic

Selecting the appropriate type of plastic for your products is crucial. Opt for plastics that are easier to recycle and have a lower environmental impact. For instance, PET and HDPE are widely recycled and have established recycling streams.

Inform customers about recycling

Educating customers on how to recycle plastic bottles properly can significantly boost recycling rates. Clear labelling and instructions on the packaging can guide consumers to dispose of their plastic responsibly, reducing contamination in recycling bins.

Buy from a sustainable company

Sourcing plastic from companies that prioritize sustainability helps ensure that the entire supply chain is environmentally friendly. As a supplier, we aim to be eco-friendly, by using renewable energy and minimizing waste in our production processes.

Choose natural colours

Using natural or clear colours in plastic products can enhance their recyclability. Dark and brightly coloured plastics are harder to recycle and often end up in landfills. By sticking to natural colours, we can improve the quality of recycled plastics.

Produce and sell in Europe

Manufacturing and distributing products within Europe can reduce the carbon footprint associated with transportation. Shorter supply chains mean lower emissions and a smaller environmental impact, making the process more sustainable.

Improve packaging designs

Innovative packaging designs that use less plastic without compromising quality can greatly reduce environmental impact. Light weighting and redesigning products to use minimal material help conserve resources and decrease waste.

Use recycled plastic

Incorporating recycled plastic into new products closes the loop and reduces the demand for virgin plastic. This practice supports the recycling industry and decreases the overall environmental footprint of plastic production.

“Let’s make plastic part of the solution and take good care of it.”

Our vision is to keep using plastic while caring for the world around us. With the right strategies and partners, you can do both. Do you want to work together on sustainable packaging with the use of recycled plastic? Or do you want to receive personalized tips for reducing your plastic footprint? Please get in touch with us.
